

AVENGER II

TALL FESCUE

AVENGER II TALL FESCUE

BROAD ADAPTATION - PROVEN PERFORMANCE

- TOP RATED VARIETY IN NORTHEAST NTEP
- FAST SPRING GREEN-UP
- PROVEN HERITAGE
- WEAR TOLERANCE
- DROUGHT TOLERANT
- FINE LEAF TEXTURE
- BROWN PATCH RESISTANCE

Avenger II is a top-rated tall fescue performer in the northeast NTEP trial. **Avenger II** exhibits rapid spring green-up and produces a dense, wear tolerant turf. In addition **Avenger II** is drought tolerant and has excellent brown patch resistance. **Avenger II** was bred from a proven performer and continues that heritage with even better overall traits. All of these traits make **Avenger II** an ideal choice for any fine-turf needs in any region. It's broad adaptation allows for a multitude of applications.

SEEDLING VIGOR

Avenger II has excellent seedling vigor providing good ground cover and out competing weeds.

2013 NTEP Mean Seedling Vigor Rating

GENETIC COLOR

Avenger II has excellent genetic color. It's dark green color allows use in a broad range of applications.

2013 NTEP Mean Genetic Color Rating

SEEDING AND OVERSEEDING Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Avenger II should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

MAINTENANCE Avenger II natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
