CONSISTENT, DEPENDABLE BLUEGRASS

Kelly is a medium dark-green variety that works well in mixtures with other bluegrasses, tall fescues and perennial ryegrasses. Due to its aggressive rhizome production, **Kelly** provides a very uniform, dense turf throughout the growing season. Additionally, **Kelly** has superior disease resistance and recovers quickly from wear damage. **Kelly** establishes quickly and can be mowed as low as 5/8 inch under moderate to high management conditions. **Kelly** also shows excellent resistance to powdery mildew, dollar spot, and blight.
