## VALKYRIE LS

TALL FESCUE

### THE TOP GUNNER OF TALL FESCUES

- TOP NTEP PERFORMER
- LATERAL SPREAD™ TECHNOLOGY
- EXCELLENT WEAR TOLERANCE
- GROWS WELL IN SHADY AREAS
- HIGH SEEDLING VIGOR

**Valkyrie LS** is a top-rated NTEP performer. Thanks to its Lateral Spread™ technology, **Valkyrie LS** scored high marks in wear tolerance. **Valkyrie LS** has fine leaf texture and is very dark green. **Valkyrie LS** jumps out of the ground with a very high seedling vigor which helps it out compete weeds and create a dense turf faster. In addition, **Valkyrie LS** exhibits better drought tolerance and disease resistance. **Valkyrie LS** is an ideal choice for all your turf needs.

**NTEP DATA**

VARIETY	SPRING DENSITY	TURF QUALITY SHADE - MEAN	LEAF TEXTURE MEAN	TURF QUALITY UNDER TRAFFIC*	CANOPY FULLNESS UNDER TRAFFIC*
<b>VALKYRIE LS</b>	<b>8.0</b>	<b>6.4</b>	<b>6.3</b>	<b>7.0</b>	<b>66.7%</b>
GRANDE 3	8.0	4.4	6.1	5.3	61.7%

- PROFESSIONAL LAWN AND LANDSCAPE
- HOME LAWNS
- MUNICIPAL USE
- SPORTS FIELDS

**SUMMER DENSITY**

Valkyrie LS maintains its turf density all year, even during the hot months of summer.

2015 NTEP Mean Summer Density Ratings.

**WINTER COLOR**

Valkyrie LS maintains its excellent dark green color year round.

2015 NTEP Mean Winter Color Ratings.

**SEEDING AND OVERSEEDING** Tall fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Valkyrie LS should be sown at a rate of 6 to 9 lbs per 1000 sq ft (275 to 400 lbs per acre), lightly covered with soil and kept moist until after the first cutting. Maximum density is achieved by planting with a slicer/seeder or following aeration, and with the application of a starter fertilizer. First mowings are generally within three weeks, or when plants first reach 3 in. in height. Overseed existing tall fescue at a rate of 225 to 300 lbs per acre.

**MAINTENANCE** Valkyrie LS natural dark color, density and pest resistance minimize the need for extensive maintenance. Generally 2 to 3 pounds of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2 to 3 inches. Under controlled conditions heights down to 1 inch can be satisfactorily maintained.
