

JETTYHARD FESCUE

- UNPARALLELED SHADE TOLERANCE
- WITHSTANDS LOW MOWING
- DARK GREEN
- DISEASE RESISTANCE
- HIGHLY DROUGHT TOLERANT

A BEAUTIFUL HARD FESCUE

Jetty hard fescue was ranked highest in the NTEP for shade tolerance and can handle growing under dense tree canopies. Unlike other hard fescues, Jetty can withstand low mowings, working well in low maintenance areas or golf courses that need to be mowed low. Jetty has a very dark green color, classifying it as one of the darkest hard fescues available. In addition, Jetty has excellent disease resistance. As with all fine fescues, Jetty is highly drought tolerant.

NTEP DATA

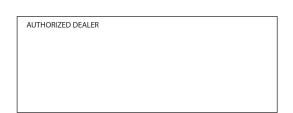

VARIETY	TURFGRASS VIGOR	LEAF SPOT MEAN	DOLLAR SPOT MEAN	
JETTY	5.3	7.9	8.3	
BEACON	5.0	7.9	8.3	
MINIMUS	4.7	8.3	8.0	
SWORD	3.7	7.9	8.2	
QUATTRO	2.7	6.6	8.2	
BLEUDIN	2.0	6.6	5.8	
LSD VALUE	1.4	0.8	0.7	

2015 NTEP DATA - HARD AND SHEEP FESCUE CULTIVARS. TURFGRASS QUALITY AND OTHER RATINGS 1-9; 9=BEST

AREAS OF USE	LEAF TEXTURE		GENETIC COLOR			
• RESIDENTIAL TURF	JETTY (HIGH)	9.0	0	JETTY (HIGH)	7.1	
• ROADSIDES						
GOLF COURSE ROUGHS						
SKI SLOPES	LOW	8.0		LOW	4.8	
 ENVIRONMENTALLY SENSITIVE AREAS 	LSD	0.5		LSD	0.3	
WILDFLOWER MIXES	Jetty has excellent leaf texture, producing a beautiful sward. It scored the highest in the recent NTEP. 2015 NTEP Leaf Texture Ratings of Fineleaf Fescue Cultivars		Jetty has excellent color, scoring the highest mark in the recent NTEP. 2015 NTEP Mean Genetic Color Ratings of Hard and Sheep Fescue Cultivars			

SEEDING Broadcast Jetty seed at 5-5 lbs. per 1,000 sq./ft for most applications. Erosion control and reclamation areas and ski slopes should be seeded at 150-200 lbs. per acre depending on the turf density desired. Seed golf course roughs at 200 lbs. per acre.

MAINTENANCE Jetty quickly establishes over a broad range of growing and environmental conditions in most soils, particularly when initial irrigation is available. On sensitive areas and slopes, levels of maintenance can be minimal with no fertilization and one mowing per season. In other turf areas, whether used alone or in combination with other grasses, maintain stand at 2 1/2 to 3" in height. A starter type fertilizer, applied at time of seeding, will greatly enhance establishment and "fill-in".
