JACKPOT FORAGE TURNIP

GRAZING AND COVER CROP TURNIP

- LOWER GROWING BULB
- IDEAL FOR GRAZING AND COVER CROP
- EXCELLENT REGROWTH AFTER GRAZING
- HIGH FORAGE YIELD
- EXCELLENT PALATABILITY

Jackpot is a new erect-growing forage turnip with multiple crowns and a firmly anchored round bulb suitable for grazing and cover crops. The **Jackpot** bulb doesn't protrude out of the soil as much as other types, allowing it to regrow and reduce hoof damage. In addition, **Jackpot** has excellent palatability and digestibility which increases intake and animal performance. Maturity is within 60-90 days of germination with optimum regrowth within 30 days for rotational grazing. **Jackpot** is also an excellent nitrogen scavenger making it ideal for use in cover crops. With greater soil contact than the old purple tops or tankard shaped bulbs **Jackpot** is the superior choice for soil health. Strike it rich with **Jackpot!**
