

WaterGard®NP™ is the ultimate seed coating offering the water absorbing and retaining ability of WaterGard® enhanced with a complete Nutrient Package. NP™ incorporates a unique micro-nutrient package to insure plants get off to a strong start. Seed treated with WaterGard®NP™ offers reduced fertilizer needs, improved seed-to-soil contact and better seed distribution thanks to its bright blue color. Most importantly, WaterGard®NP™ helps users consistently improve results by protecting against environmental variables.

ABSORBS AND RETAINS WATER

WaterGard® is a unique polymer coating that is nontoxic, biodegradable, odorless and pet-friendly. It works by capturing, storing and releasing available soil moisture to the seed. As it comes in contact with water, it expands, encapsulating the seed within a moisture rich environment. This prolongs the benefits of rain or irrigation, reducing seedling stress and optimizing seedling development. Resulting in faster germination and establishment of healthy, green turf.

A UNIQUE NUTRIENT PACKAGE

NP™ seed-applied fertilizer improves seedling growth by providing vital nutrients, including iron, zinc, and manganese right after germination—before the seedling can easily access soil nutrients on its own. Improving early growth provides benefits in establishment and the ability to withstand challenging growing conditions. Getting off to a good, healthy start is critical to your turf's long-term performance.

FASTER GERMINATION

Seedlings emerge 2-3 days faster with 20-30% more plants

INCREASED SEEDLING VIGOR

10-20% larger to better compete with weeds

MORE DEVELOPED ROOTS

30% larger, more developed roots to better access nutrients and moisture

ABILITY TO COPE WITH STRESS

10-20% larger seedlings are able to withstand early-season stress
