

# MUSKET

COLONIAL BENTGRASS

**QUICK SPRING  
GREEN-UP**

**IMPROVED SUMMER  
PERFORMANCE**

**EXCELLENT BROWN  
PATCH RESISTANCE**

**SUPERIOR TURF  
QUALITY**

**GOOD COLOR**

**AREAS OF USE**

- Golf Course Greens, Tees, and Fairways
- Athletic Turf
- Sod Production
- Professional Landscape

Musket is quick to recover in the spring, greening up faster than most other varieties. Musket was developed from germplasm that combined early spring green-up with improved summer performance. A factor that allows Musket to excel in the summer is its excellent resistance to Brown Patch. In addition Musket has good green color with superior turf quality. Its density and leaf texture make it an excellent choice for all your bentgrass needs.

**SEEDING**

**New Seeding:** at a rate of  $\frac{3}{4}$ - $1\frac{1}{4}$  lbs per 1000 sq ft, in two directions, and with soil temperatures ideally above 65°F. An extender like granular corn meal may improve uniformity. Insure solid seed to soil contact.

**Interseeding:** aerify or verticut to open up canopy. Topdress to fill open areas to create a favorable seed bed. Broadcast, slitseed, or drop seed at  $\frac{1}{4}$  to  $\frac{1}{2}$  lbs per 1000 sq ft. Roll to establish good seed to soil contact. Water enough to start the germination process. Enjoy.
