

Solstice IV

INTERMEDIATE RYEGRASS

Solstice IV is the latest Turf Intermediate Ryegrass in the MVS portfolio. Solstice IV exhibits excellent turf quality compared to other intermediates available on the market. It ranks well in density and leaf spot resistance. Solstice IV stands out from other intermediates on the market because it is grown on certified clean fields with proper distance from other common annual production fields to ensure no cross pollination happens. This generation of Solstice Intermediate has shown significant improvement in turf quality over previous generations. Solstice IV is a great standalone variety but also mixes well with overseeding perennial ryegrass.

IMPROVED TURF QUALITY

ENHANCED LEAF SPOT RESISTANCE

EXCELLENT DENSITY

AREAS OF USE

- Tees & Fairways
- Athletic Fields
- Overseeding Athletic Fields
- Overseeding Warm-Season Turf
