

Dynamite 2G-LS is an elite turf-type tall fescue developed to deliver outstanding adaptability, durability, and visual appeal across a wide range of turf environments. Dynamite 2G-LS has demonstrated exceptional performance in the 2025 NTEP Trials. Its key strengths include excellent shade tolerance, superior traffic tolerance, dark green genetic color, rapid establishment, and strong resistance to Brown Patch and Gray Leaf Spot disease. These characteristics make Dynamite 2G-LS an excellent choice for premium turf seed blends and mixtures where fast establishment, wear tolerance, disease resistance, and long-term turf quality are essential for both residential and commercial landscapes.

IMPROVED SHADE TOLERANCE

HIGH TRAFFIC TOLERANCE

SEEDING

Tall Fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Dynamite 2G-LS should be sown at a rate of 6-9 lbs per 1000 sq ft (275-400 lbs per acre). Max density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. Overseed existing tall fescue at a rate of 225-300 lbs per acre.

MAINTENANCE

Generally 2-3 lbs of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2-3". Under controlled conditions heights down to 1" can be maintained.
