

Firecracker 2G-LS Tall Fescue is an elite turf-type tall fescue developed to provide superior genetic performance across a broad range of environments. Firecracker 2G-LS has demonstrated exceptional performance in the 2025 NTEP trials, consistently ranking among the leading entries for key agronomic and turf quality characteristics. Notable strengths include outstanding overall turf quality, rapid seedling vigor for fast establishment, excellent gray leaf spot resistance, superior summer density under heat stress, fine leaf texture, and early spring greenup. These performance attributes make Firecracker 2G-LS an excellent choice for premium turf seed blends and mixtures where long-term turf quality, disease resistance, seasonal performance, and visual uniformity are critical.

GRAY LEAF SPOT RESISTANT

EXCELLENT SEEDLING VIGOR

STRONG DENSITY THROUGH SUMMER STRESS

LATERAL SPREAD™ TECHNOLOGY

AREAS OF USE

- Professional Lawn and Landscape
- Residential Lawn
- Municipal Use
- Sports Fields

2025 NTEP Data, All Mean Data Used. Turfgrass Quality and Other Ratings 1-9; 9=Best

SEEDING

Tall Fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Firecracker 2G-LS should be sown at a rate of 6-9 lbs per 1000 sq ft (275-400 lbs per acre). Max density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. Overseed existing tall fescue at a rate of 225-300 lbs per acre.

MAINTENANCE

Generally 2-3 lbs of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2-3". Under controlled conditions heights down to 1" can be maintained.
