

SUPERSONIC 2GL TALL FESCUE

Supersonic 2GL Tall Fescue is an elite turf-type tall fescue bred for rapid establishment, superior disease resistance, and exceptional seasonal performance. A strong performer in the 2025 NTEP Turfgrass Evaluation Program, Supersonic 2GL has consistently demonstrated convincing results. Its standout characteristics include industry-leading early spring green-up, excellent resistance to both gray leaf spot and brown patch diseases, superior spring density, and exceptional seedling vigor for fast, uniform establishment. These performance attributes make Supersonic 2GL an outstanding choice for premium turf seed blends and mixtures where rapid establishment, early-season recovery, disease resistance, and consistently high turf quality are essential.

SEEDING

Tall Fescue prefers warmer soil for germination, typically 55°F to 58°F. In the Transition zone this means early spring and early fall. Further north, late spring and late summer is preferred. Supersonic 2GL should be sown at a rate of 6-9 lbs per 1000 sq ft (275-400 lbs per acre). Max density is achieved by planting with a slicer/seeder or following aerification, and with the application of a starter fertilizer. Overseed existing tall fescue at a rate of 225-300 lbs per acre.

MAINTENANCE

Generally 2-3 lbs of nitrogen as part of a balanced fertilizer applied annually is all that's required. Cutting heights should range between 2-3". Under controlled conditions heights down to 1" can be maintained.
